## Multiple Myeloma Research Consortium

**MMRC**

Multiple Myeloma  
Research Consortium

## Dear Friend

---

With one of every two families facing a cancer diagnosis and one in three Americans expected to die from cancer, new models to accelerate the development of effective new treatments are urgently needed. Thanks to your support, the Multiple Myeloma Research Consortium (MMRC), with our business approach to science and focus on quality, efficiency, and accountability, now stands as one such model and is making unprecedented progress.

The MMRC's unique approach has enabled us to systematically break down barriers slowing research and quicken the pace at each step along the drug development pathway. More specifically, in 2007, the MMRC:

- Expanded its model to include 15 world-renowned research institutions, increasing the Consortium's capacity to conduct high-quality clinical trials and correlative studies;
- Advanced a diverse portfolio of seven Phase I and Phase II clinical trials, including promising compounds directed at high-priority targets, novel combinations, and trials aimed at diverse patient populations;
- Supported advanced correlative science studies to better understand what drugs are most effective in treating various sub-groups of myeloma patients, laying the foundation for the eventual development of personalized medicine.

These successes are a testament to your generosity and commitment to our mission. With these and other key milestones reached, the MMRC is now well positioned to forge new ground in bringing patients the next treatment breakthrough.

Thank you for your support of the MMRC.

Sincerely,

Founder and CEO
